Farm Service Agency

Fact Sheet June 1999

Feed Grains

Summary of 1996-1999 Program and Related Information

Statutory Background

The 1996 farm bill provides for fixed, but declining transition payments, nonrecourse marketing assistance loans with marketing loan provisions, and loan deficiency payments for the 1996-2002 feed grain crops.

Eligible Crops

Corn, grain sorghum, barley, and oats are eligible for production flexibility payments and the loan program. However, the feed grains must have been produced on a farm enrolled in a Production Flexibility Contract (PFC) for a producer to receive loan program benefits on the feed grains.

Eligible Producers

A producer on a farm that has a corn, sorghum, barley, or oats base established for the 1996 crop is eligible to enter into a PFC.

Production Flexibility Payments

For each of the 1996-2002 crops of feed grains, the 1996 farm bill allotted a fixed amount of funds to be paid in aggregate to feed grain PFC holders. The net funds available for 1996- and 1997-crop feed grain payments were subject to

1994-crop and 1995-crop deficiency payment obligations under the 1994 and 1995 feed grain production adjustment programs.

For barley and oats, 1996-crop funds were also subject to adjustment due to overpayment of 1995-crop advance deficiency payments that were required to be repaid in fiscal year 1996.

For corn and sorghum, the overpayments of 1995-crop advance deficiency payments were required to be repaid in fiscal 1997 and were allocated to 1997-crop PFCs. (See table on Page 2.)

Planting Flexibility

Any commodity or crop may be planted on contract acreage on the farm except fruits and vegetables (other than lentils, mung beans, and dry peas). However, fruits and vegetables may be grown under the following situations:

- in any region with a history of double-cropping of contract commodities with fruits and vegetables;
- on a farm with a history of planting fruits or vegetables, except that the contract payment will be reduced by an acre for each acre planted to a fruit or vegetable on the farm; and

3. by a producer with an established history of planting a specific fruit or vegetable, except that the area planted may not exceed the producer's average annual plantings in the 1991-1995 crop years (excluding any year with no plantings) and that a contract payment will be reduced by an acre for each acre planted to the fruit or vegetable.

Payment Limitations

In general, the total amount of PFC payments to an individual may not exceed \$40,000 for all commodities. However, the adjustments made to each commodity's allocation due to refunds of unearned (over-payment of) 1995-crop deficiency payments were excluded from the \$40,000 payment limit. Instead, the portion of fiscal 1996 PFC payments from refunds of 1995-crop overpayments were subject to a separate \$50,000 limit.

For corn and sorghum, the refunds of unearned 1995-crop deficiency payments were due in fiscal 1997 and were included in fiscal 1997 PFC payments.

For barley and oats, the refunds of unearned 1995-crop deficiency payments were due in fiscal 1996 and were included in fiscal 1996 PFC payments.

Marketing Assistance Loan Rates

National average feed grain marketing assistance loan rates are set annually based on historical prices, the stocks-to-use ratio for corn, and a statutory maximum level for corn.

The corn loan rate is set at 85 percent of the simple average price received by producers during the marketing years for the immediately preceding 5 crops, excluding the highest and lowest prices, but not more than \$1.89 per bushel (the 1995 loan level).

The Secretary of Agriculture may reduce the corn loan rate by up to 10 percent if the estimated stocksto-use ratio is equal to or greater than 25 percent. Up to a 5-percent reduction in the corn loan rate may be made if the estimated stocks-to-use ratio is less than 25 percent but not less than 12.5 percent. No adjustment to the corn loan rate may be made if the estimated stocks-to-use ratio is less than 12.5 percent.

At the time that the 1996 loan rates were determined, the estimated stocks-to-use ratio for corn was 7.3 percent, a level which did not permit any adjustment to the corn loan rate.

For the 1997 crop of corn, the stocks-to-use ratio was estimated at 16.3 percent, a level which permitted an adjustment of up to 5 percent. However, the Secretary elected not to lower the corn loan rate.

¹ Estimate. Rates for 1996-1999 are actual rates.

Funds Available for Production Flexibility Payments to Producers of Feed Grains¹

	Total PFC Crops	Total Feed Grains	Corn	Grain Sorghum	Barley	Oats
Share, %	100	53.64	46.22	5.11	2.16	0.15
_		(\$	Smillions)_			
1996	5,570	2,987.7	2,574.5	284.6	120.3	8.4
1997	5,385	2,888.5	2,488.9	275.2	116.3	8.1
1998	5,800	3,111.1	2,680.8	296.4	125.3	8.7
1999	5,603	3,005.4	2,589.7	286.3	121.0	8.4
2000	5,130	2,751.7	2,371.1	262.1	110.8	7.7
2001	4,130	2,215.3	1,908.9	211.0	89.2	6.2
2002	4,008	2,149.9	1,852.5	204.8	86.6	6.0

¹Do not include funds due to adjustment of prior year deficiency payments. Also, funds not used due to payment limitations are not made available to holders of contracts where the payment limitation has not been reached or to holders of contracts in subsequent years. Funds forfeited due to contract violations may be added to the subsequent year's allocation. Totals may not add due to rounding.

For the 1998 crop of corn, the stocks-to-use ratio was estimated at 10.3 percent, a level which did not permit any adjustment to the corn loan rate.

For the 1999 crop of corn, the stocks-to-use ratio was estimated at 20.8 percent, a level which permitted an adjustment of up to 5 percent. However, the Secretary elected not to lower the corn loan rate.

For each of the other feed grains, the marketing loan assistance rate is set in relation to corn, taking into consideration the feed value of each in relation to corn. Because market prices are a function of feed values and other uses, average farm prices during the preceding 5 years relative to corn are used to determine rates for sorghum, barley, and oats.

Under marketing loan provisions, producers may (under certain conditions) repay a 9-month nonrecourse price support loan at less than the loan rate plus accrued interest and other charges whenever CCC estimates that the local market price is lower. Producers are also eligible for a loan deficiency payment (LDP) in lieu of obtaining a loan.

Loan rates:

- (1) vary among counties and commodities.
- (2) are based on the county where the commodities are stored. and
- (3) may be adjusted by CCC with premiums and discounts to reflect the quality factors of a given quantity placed under loan.

Other Loan Eligibility Requirements

For crops to be eligible for a marketing assistance loan or an LDP, producers must:

- have produced the feed grain on a farm that is enrolled in a Production Flexibility Contract,
- comply with applicable conservation and wetland protection requirements.
- report the planted acreage for the crop,
- have beneficial interest in the commodity on the date the loan or LDP is requested and, in the case of a loan, be retained while the loan is outstanding, and
- ensure that the grain meets the CCC minimum grade and quality standards.

National Average Feed Grain Marketing Assistance Loan Rates: 1996-1999

(\$/bushel)

Crop Year	Corn	Sorghum ¹	Barley	Oats
1996	1.89	1.81 (3.23)	1.55	1.03
1997	1.89	1.76 (3.14)	1.57	1.11
1998	1.89	1.74 (3.11)	1.56	1.11
1999	1.89	1.74 (3.11)	1.59	1.13

¹Numbers in parenthesis are the loan rate expressed in dollars per hundredweight.

Beneficial Interest

A producer retains beneficial interest in the commodity if all of the following remain with the producer:

- control of the commodity. The producer retains the ability to make all decisions affecting the commodity, including movement, sale, and the request for a loan or LDP.
- risk of loss in the commodity. The producer is responsible for loss or damage to the commodity. If the commodity is insured, any indemnity must be payable to the producer, and
- <u>title</u> to the commodity. The producer has not sold or has not delivered the commodity or warehouse receipt to the buyer. Title may be considered to be transferred before the producer receives payment for the commodity.

Once beneficial interest in the commodity is lost, the commodity loses eligibility for a loan or an LDP and remains ineligible even if the producer later regains beneficial interest.

For further information see the Farm Program Fact Sheet on "Beneficial Interest Requirements For Loans and LDPs, Excluding Sugar and Tobacco" or contact a local FSA county office.

Loan Settlements

Loans mature on the last day of the ninth calendar month following the month in which the loan is approved.

Producers may settle their outstanding nonrecourse loan:

- during the 9-month loan period by repaying the loan, or
- upon maturity by forfeiting the commodity to CCC.

Loan Repayment Rates

The loan repayment rate is the lower of (1) the applicable county loan rate plus accrued interest and other charges (per bushel) or (2) the marketing loan repayment rate for the respective commodity.

Loan repayment rates are established and available at each county FSA office based upon the previous day's market prices for each feed grain at appropriate U.S. terminal markets, as determined by CCC, adjusted to reflect quality and location.

Marketing Loan Gains

Producers realize a marketing loan gain if they repay their loans when the loan repayment rate is less than loan principal.

The marketing loan gain rate equals the amount by which the applicable loan rate exceeds the marketing loan repayment rate for the respective loan.

Loan Deficiency Payments (LDPs)

Producers who are eligible to obtain a loan, but who agree to forgo the loan, may obtain an LDP.

The LDP rate equals the amount by which the applicable county loan rate where the grain is stored exceeds the loan repayment rate for the respective commodity.

Corn Marketing Loan/LDP Examples

Corn Marketing Loan Examples Under Various Price Scenarios (\$ per bushel)

<u>3</u>
1.89
1.95
1.75
1.75
0.14
1.9 1.7 1.7

The LDP equals the LDP rate times the quantity of feed grain for which the LDP is requested and is otherwise eligible to be placed under loan.

Final Loan/LDP Availability Dates

Final loan/LDP availability dates for the 1998 crop are:

March 31, 1999 — Barley and Oats

May 31, 1999 — Corn and Grain Sorghum.

Producers may either obtain a loan or receive an LDP on all or part of their eligible production during the loan availability period.

Production Evidence

Producers who repay a loan at less than the loan rate plus accrued interest and other charges or receive an LDP must provide production evidence acceptable to CCC, such as evidence of sales, warehouse receipts, or load summary or assembly sheets.

Payment Limitations

The sum of LDPs and marketing loan gains for all commodities is subject to a \$75,000 per person payment limitation. This payment limitation is separate from the \$40,000 per person limitation for PFC payments.

The U.S. Department of Agriculture (USDA) prohibits discrimination in its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint, write USDA, Director, Office of Civil rights, Room 326-W, Whitten Building, 14th and Independence Avenue, Washington, D.C., 20250-9140, or call (202) 720-5964 (voice or TDD). USDA is an equal employment opportunity employer.

For 1965 through 1974 statistics, see Feed Grains Fact Sheet dated May 1985.

ENDNOTES

- 1/ Season average price including the price-support payment average to reflect total production.
- 2/ Barley not included in feed grain program in 1967, 1968, and 1971.
- 3/ Beginning with 1979, marketing average prices are being used in lieu of season average prices.
- a Support price for farmers who complied with acreage allotments (applicable only to certain years prior to 1960).
- b Support price for farmers who did not comply with acreage allotments (applicable only to certain years prior to 1960).
- c Total support.
- d Price support payment; 1996 and forward, contract rate. The 1998 rate includes Market Loss Assistance Payments.
- e Price support loan per bushel for corn grading No. 2.
- f Loan rate.
- g Participants in the 1971 feed grain program were guaranteed a national average of \$1.35 a bushel on the production from half the corn base, and \$2.21 a hundredweight (\$1.24 a bushel) on half the sorghum base.
- h Participants in the 1972 feed grain program were guaranteed a national average of \$1.41 a bushel on the production from half the farm corn base, \$2.39 a hundredweight (\$1.34 a bushel) on half the farm sorghum base, and \$1.15 per bushel on half the farm barley base.
- i Set-aside payments for diverting the specified percentage of the corn or grain sorghum base were to be equal to the difference between the national average received by farmers during the first 5 months of the marketing year and the guarantee. Set-aside payments for a farm were calculated on half the feed grain base times the farm yield times the payment per bushel. Eligible producers received preliminary payments in July 1971 of 32 cents per bushel for corn and 29 cents per bushel for sorghum, multiplied by the yield established for the farm times half the corn and sorghum base.
- j Set-aside payments for the 1972 feed grain program, as specified by law, were calculated in the same manner as for 1971. Payments to eligible producers in the 1972 program were 40 cents per bushel for corn, 38 cents per bushel for sorghum, and 32 cents per bushel for barley, times the farm yield on one-half the feed grain base. For 1973, the 10 percent set-aside provision rate was 32 cents per bushel for corn, 30 cents per bushel for sorghum and 26 cents per bushel for barley times the yield on one-half the feed grain base. The 0 percent set-aside provision rate was 15 cents per bushel for corn, 14 cents per bushel for sorghum and 12 cents per bushel for barley, times the farm yield on one-half the feed grain base.
- k Participants in the 1973 feed grain program were guaranteed a national average price of \$1.64 a bushel on the production from half the farm corn base, \$2.61 a hundredweight (\$1.46 a bushel) on half the farm sorghum base, and \$1.27 per bushel on half the farm barley base.
- I Established target price, guaranteed on production from allotment acreage.
- m Established target price, guaranteed on 80-100 percent of acreage planted for harvest.
- n Target price for those staying within normal crop acreage (NCA)/target for those exceeding their NCA.
- p First entry applicable to producers who planted within their NCA, second entry for those who planted in excess of their NCA.
- q Loan rate for regular loans/loan rate for crops in the farmer-owned reserve.
- r First entry actual loan rate, second entry Gramm-Rudman-Hollings reduction of 4.3 percent.
- s Includes estimated value of PIK compensation.
